## Membership

Roll Call	
Attendees	Absentees
Danny Green	Tim Fuchs
Dylan Van Den Einde	Jered Gunufson
Tom McDonald	
Jared Roach	

## Agenda Details

Topic	Discussion	Recommended Course of Action
Course Overview	The Board emphasized the need for soft skills such as communication, and also the importance of teaching Safety to students. The point was also made that steel and post-and-beam framing, as subjects, should be explored and incorporated more in-depth into the curriculum.	Demonstrate the importance of communication weekly. Help students acquire OSHA certification. Incorporate Steel Framing into the next house project.
House build Project/ New foundation.	Difficulties and Benefits of building an on-campus project were discussed. Not being able to sell the house as quickly as needed is a difficulty, but also being free to take our time and focus on difficult areas without rushing because of the smaller-scale project is a benefit.	Set up a second Foundation to give the school more time to sell the house if we were to continue with the on-campus build.
Future Projects	The Idea of creating a relationship with the <b>Forx Builders Association</b> as an option if the on-campus build doesn't work out.	Restore our relationship with <b>Forx Builders Association</b> .
