

Advisory Meeting Minutes for April 2, 2008

✓ Shop tour

- A lot of interest in the machining equipment; overall feeling was that this was a good acquisition
- Concern about exhaust and spatter removal under the CNC plasma cutter

§ Pan can be made very easily, hang curtains and mount exhaust on one end

✓ Equipment requests

- Overall consensus that the dvds and electrode oven were a good idea; agreed that CMM was on the dream list

✓ Program changes

- Waiting to hear back about changes; I informed them that I would contact them in about two weeks (April 14-18) to get their input, so that the items can go before AASC in May
- There was a concern about the lack of stick welding; it was mentioned that we cut WELD 1102 – too much material for only 4hrs of lab time per week; with the possible new courses, this will not be an issue; the courses will integrate with each other
